Fax: (979) 845-3140
Web Site: <http://www.afpc.tamu.edu>

Summary of AFB Counter Cyclical Income Assistance Safety Net

- Average cash receipts, 1996-99, by State
 - State Production = harvested acres * yield
 - State Receipts = state production * national price
 - State Average Receipts = $(\text{State Rec}_{1996} + \dots + \text{State Rec}_{1999}) / 4.0$
- Trigger for payment determination 94%
- Trigger Level of Receipts
 - State Trigger for Receipts = State Average Receipts * 0.94

Summary of AFB Counter Cyclical Income Assistance Safety Net

- Simulation Analysis

- Simulate stochastic national price
- Simulate state yield
- Simulate state harvested acres
- Calculate state receipts = National Price * State Yield * State Harvested Acres
- If (Calculated State Receipts < State Trigger Receipts) then make payment of lost receipts

Summary of AFB Counter Cyclical Income Assistance Safety Net

- Alternative Scenarios simulated

- Triggers for payment determination: 0.92, 0.93, 0.94, 0.95, and 0.96
- Alternative periods for calculating average trigger receipts
 - Simple average 1996-99
 - Simple average 1996-00
 - Simple average 1995-99
 - Simple average 1997-00
 - Olympic average 1995-99
 - Olympic average 1996-00

Summary

- AFB • O5-9 appears to give the greatest dollar return per acre in general
- Since the program is set up on state production bases flexibility provisions could be problematic
- Could discourage crop mix changes

Summary of AFB Counter Cyclical Proposal for Major Crops, Assuming a 94% Trigger and Alternative Base Periods

Crop	Avg 1996-99	Avg 1996-00	Avg 1995-99	Avg 1997-00	O Avg 1995-99	O Avg 1996-00
